A WORLD LEADER IN FUME EXTRACTION TECHNOLOGY

AD GoldSEAL + Cyclone

LASER

Last Updated on 05.02.2018

The complete solution for the extraction, filtration and recovery of precious metals.

The AD GoldSEAL + Cyclone is a dust extraction system designed for the jewellery industry that recovers and collects precious metals.

The metal particles are collected in an easy to remove tray and the HEPA filter can be incinerated to reveal the precious metal collected in the filtration process.

Automatic Flow control allows the user to pre-set correct air flow rates, for lower noise levels and allow further protection of the HEPA filter.

The Cyclone provides pre separation of precious metal, allowing easier efficient collection of precious metal from the collection pot and prolonging the life of the main filter.

Technology

HEPA filter

Automatic flow control (AFC) technology

Reverse flow air (RFA) technology

Multi voltage sensing (MVS) unit

ProTECT service plan

SureCHECK quality standard

Key features of the AD GoldSEAL + Cyclone

Reverse flow filter technology
Standard

Auto sensing voltage (90v - 257V) For global use
Standard

Removable collection tray
Standard

HEPA filtration
Standard

Lockable filter inside unit
Standard

Incinerable filter to recover maximum available gold
Standard

Tamper proof
Standard

24V Remote stop / start interface
Optional

Automatic flow control
Standard

Filter status warnings
Standard

High pressure turbine
Standard

Lockable unit
Standard

Filter box designed to aid removal of collected gold
Standard

Small footprint
Standard
